

Starlinger stands for

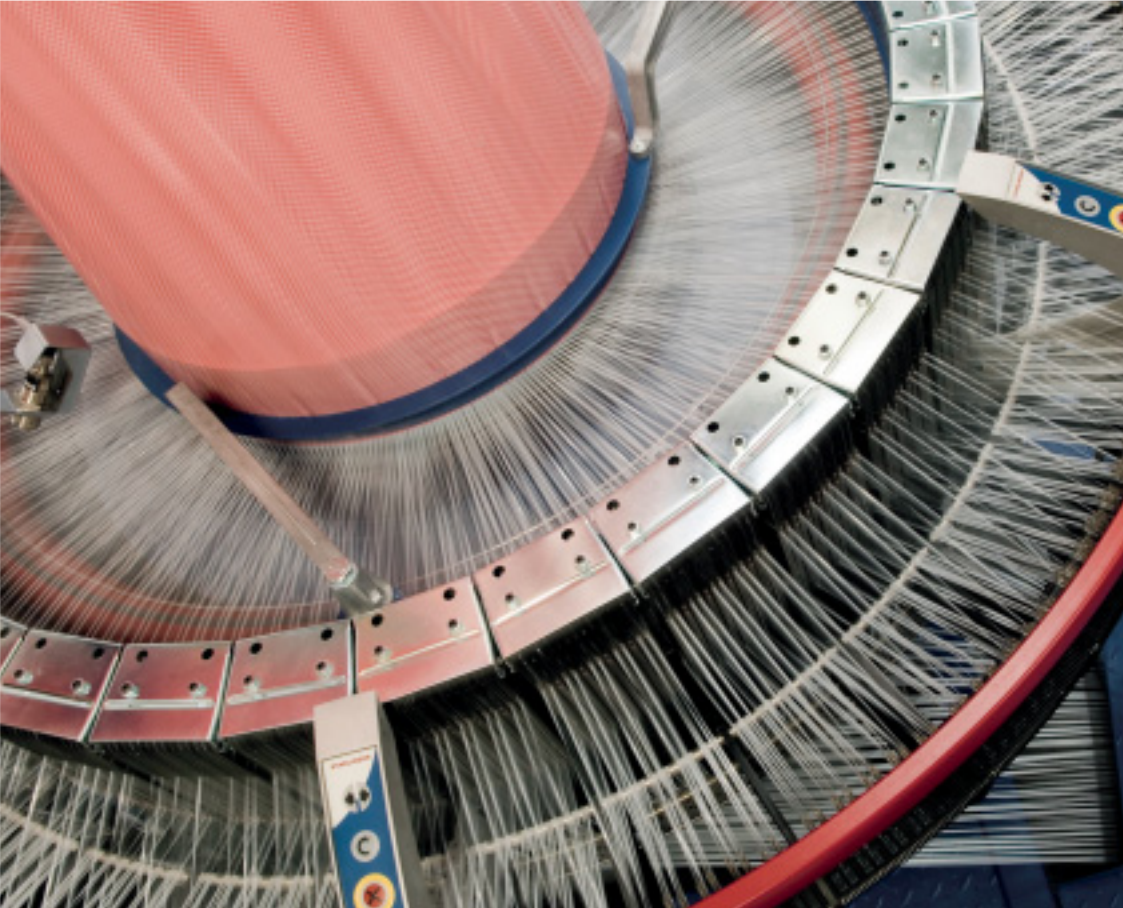

- * teamwork with the customer
- * hi-tech: best process and machinery technology – fine European workmanship
- * hi-ROI: the operative advantages of technology fine-tuned for efficiency and productivity, combined with experience-based consulting for resource and cost optimization
- * ongoing product development that opens up new markets for customers
- * the number one on the market
- * in more than 130 countries worldwide

Newest technology paves the way for product innovation:

- * **starEX extrusion technology:** highly productive machine for standard and high speed applications, suitable for producing all kinds of tape, economical, compact, highly efficient, modular design
- * **stacoFIL winding technology:** highest precision, flawless quality, central system control for yarn tension, low energy consumption
- * **alpha and SL weaving technology:** high speed circular loom, worldwide proven technology, outstanding fabric quality, high economic efficiency, versatile use
- * **stacoTEC coating technology:** outstanding coating technology, inline lamination with printed PP film, coextrusion applications, versatile use, high economic efficiency
- * **dynaFLEX and rollFLEX printing technology:** high speed printing, first-rate quality printing on fabric, fast and easy product change, high economic efficiency
- * **tubeTEC tubing technology:** tubing of coated woven fabric (single layer), extrusion sealing for back seam, compact and easy-to-handle, with or without gusset
- * **slitTEC slitting technology:** high speed slitting machine, amazingly simple adjustment, well thought out and operator-friendly
- * **ad*starKON conversion technology:** high speed valve bottomer, worldwide patented hot air sealing technology, unrivalled efficiency, outstanding flexibility, exceptional durability
- * **KON 2002 conversion technology:** high speed fully automatic cutting and sewing line, fabric-saving operation, high economic efficiency, compact and easy-to-handle design, versatile use
- * **baleTEC baling technology**
- * **recoSTAR universal recycling technology:** state-of-the-art recycling technology for the processing of films, staple fibres, non-wovens, mono- and multifilaments, tapes and fabrics, as well as solid lumps, start-up waste and big injection moulding parts, from materials such as PE, PP, PS and PA

AD*STAR® is a registered trademark and is produced exclusively on Starlinger machines.
